WELD BREAKER

- DIN 7255
- Can be sharpened by hand
- Extremely thin: 0.1"
- Length: 11.8"

Extremely thin
specialty tool

Half round cutting
edge at the side

This spot weld breaker is meant to replace or reskin body panels and frame sectioning. It is inserted between seams or panels after spot welds are drilled out to completely remove panel sections. A treated steel shank with an extremely thin, half-rounded cutting edge finishes the separation process. This tool stores inside the handle for safety, with a simple cross guard to protect your hand. The smooth blade ensures that you have full control.
